Mathematics for Economics

Syllabus

3П 1.5

MATH-111

Specialty: 073 "Management"

Educational program "Information Technology Management"

Quarter/Year: Spring/2025

ECTS Credits: 6

Instructor: Dr. Anastasiia Kinash, Ph.D., As. Prof. US Credits: 3

Contact information:

anastasiia.kinash@uacu.edu.ua

Prerequisites: -

Prerequisites: -

Course Description

The course presents topics in algebra, including the number system, percentages, polynomials, algebraic functions, exponents, radicals, linear and quadratic equations, inequalities, lines in the plane, linear modeling, algebra of functions, exponential functions and systems of equations and inequalities. The course develops the topic of graphing in the coordinate plane with analysis of equations and graphs with applications.

Topics covered include functions and using functions to create simple models of real world problems. The main focus is made on practicing the skills necessary to properly manipulate algebraic expressions and equations. Development and solutions of mathematical models include economic and other applications.

This course will fulfill a prerequisite for future math and economic disciplines.

Course Outcomes

PH3. Demonstrate knowledge of theories, methods and functions of management, modern concepts of leadership.

PH4. Demonstrate skills to identify problems and justify management decisions.

PH6. Identify skills of search, collection and analysis of information, calculation of indicators to justify management decisions.

PH7. Demonstrate organizational design skills.

PH9. Demonstrate skills of interaction, leadership, teamwork.

PH10. Have the skills to justify effective tools to motivate the staff of the organization.

PH11. Demonstrate skills of situation analysis and communication in various areas of the organization.

PH17. Perform research individually and/or in a group under the guidance of a leader..

Competencies

3K8. Skills in the use of information and communication technologies.

3K10. Ability to conduct research at the appropriate level.

CK4. Ability to identify functional areas of the organization and the relationships between them.

CK8. Ability to plan the activities of the organization and manage time.

CK12. Ability to analyze and structure the problems of the organization, to form sound decisions.

Internationality: Adherence to the international standards in educational process, considering different examples of simple mathematical models' application in solving economic problems.

Communications

For individual issues, students should contact the professor **ONLY** by given e-mail or by Moodle. In the Subject line they should put: UACUFirstNameLastName. E-mail messages will normally be answered within 24 hours.

Note! Only emails sent from the student's corporate email address will be answered.

Attention! Official and only language used for assessment activities is English. Official and only languages used for communication within the University are Ukrainian and English.

Student Responsibilities

Time Commitment

The study of technical courses is cumulative (i.e., an understanding of earlier material is necessary to grasp concepts covered later). Past experience has shown a high correlation between procrastination and low grades. Students must be committed to completing tasks on time.

Students are responsible for following the schedule, attending classes, completing assignments on time and to the required standards, and maintaining academic integrity. These responsibilities are not open for discussion with instructors or the dean's office.

Technical Aspects

The student is obliged to provide himself/herself with all the necessary technical equipment for the educational process (laptop or computer, webcam, headsets or headphones and microphone), as well as access to the Internet.

Only students signed-in with their own first and last name are allowed into video consultations in Zoom.

Grading Policy

The course is based on mastery of course outcomes. Student grades for this course will be calculated based on performance.

Note: the minimal grade to pass a subject is 60%.

Graduate Grading Guidelines

The assignment of a letter grade for a course is an indication of the student's overall success in achieving the learning outcomes for the course. The course letter grade may be viewed as a summary statement of the student's achievement in individual assessments (assignments & activities). These assessments are intended to identify for students their strengths as well as those areas in need of improvement. Student work is assessed according to the guidelines below.

Course-level Grading guidelines:

Grade	ECTS Grade	International Grade
90% - 100%	A	5 (Excellent)
83% - 89%	B	4 (Very Good)
75% - 82%	C	4 (Good)
70% - 74%	D	3 (Good)
60% - 69%	E	3 (Acceptable)
35% - 59%	FX	Not acceptable, possible repetition of course

Criteria for grading:

ECTS grade	Requirements for the student
A	The student demonstrated a comprehensive systemic and in-depth knowledge of program material; processed basic and additional literature; obtained a solid grasp of the conceptual apparatus, methods, techniques and tools provided by the program; found creative abilities in the presentation of the educational program material both on this issue and on related modules of the course and related courses, or the student had a current control of 90-100 points
B	The student demonstrated good knowledge of program material; processed the basic literature, mastered the conceptual apparatus, methods, techniques and tools provided by the program, but with some inaccuracies
C	
D	The student showed mediocre knowledge of the core program material; learned information mainly from a lecture course or just one textbook; mastered only certain methods, techniques and tools provided by the program
E	
FX	The student has significant gaps in knowledge of the main program material; fragmentary mastered the basic concepts, techniques and tools; significant mistakes are made when using them

Maximum total possible points – 250 points incl. (Midterm and Final exam are 70% of overall evaluation, where Midterm – 30% and Final – 40%)

Test / Assignment / Project – 50 points (several times during the course)

Consultations – 25 points (10-15% of the total for the course are allocated for consultations)

Midterm exam – 75 points

Final exam – 100 points

Student Workload

It is assumed that for each out of 17 class sessions a student spends about 10.5 academic hours of work. This includes 3.5 academic hours of working on lecture materials (including consultations) and 7 academic hours of personal work. Personal work includes: reviewing lectures, practice in solving tasks and problems, preparing for assessments.

Please pay attention that 1 academic hour equals to 40 minutes.

Assignment Format

- All work should be shown in time. If the student misses the deadline – the task is failed.
- **Midterm** covered topics from previous lectures (weeks 1-7). It included multiple choice questions and cases (problems) and took about 1 hours.
- The **Final exam** covered all course material and included multiple choice questions and cases (problems). It lasts for 1.5 hours. Admission to the Final exam is possible only if all the tasks of the curriculum are covered.
- After the **Midterm** and **Final** is graded a student has access to the grade only. Access to the attempt, corrects answers and information whether the answer is correct cannot be granted.

Academic dishonesty

Academic integrity is submitting one's own work and properly acknowledging the contributions of others. Forms of academic dishonesty include:

1. **Plagiarism** – submitting all or part of another's work as one's own in an academic exercise such as an examination, a computer program, or written assignment.
2. **Cheating** – using or attempting to use unauthorized materials on an examination or assignment, such as using unauthorized texts or notes or improperly obtaining (or attempting to obtain) copies of an examination or answers to an examination. Including the use of artificial intelligence and pre-prepared answers to the questions of tasks is prohibited (unless otherwise specified in the task itself or allowed by the instructor).
3. **Facilitating Academic Dishonesty** – helping another commit an act of dishonesty, such as substituting for an examination or completing an assignment for someone else.
4. **Fabrication** – altering or transmitting, without authorization, academic information or records.

Any violation of these rules constitutes academic dishonesty and is liable to result in a failing grade and disciplinary action. In case of any academic dishonesty a student is not allowed to continue or retake the assessment activity and for the Final the unsatisfactory grade (“0”) is assigned for the course total. Cases of the academic dishonesty are not considered by the Academic Council.

Midterm and **Final** are valid only if they are taken on-campus (room defined by the dean's office) and on UACU's computer/laptop or online on the student's computer/laptop using Zoom and other conditions defined by the dean's office to avoid the cases of academic dishonesty. Students who will not meet this requirement will be expelled from the course with grade “0”.

In case of missed **Midterm** or **Final** exam (for a valid reason like sickness or an emergency) a request to repeat the exam is possible. Permit to repeat a **midterm** or **final** exam is done through a letter to the dean's office with request and approval of subject lecturer.

Submission or retaking of any assessment activities after deadlines are forbidden.

Submission & Return Policy

Assignments must be submitted to the professor on or before the due date indicated in the Course Schedule. The assignments submitted after the due dates receive zero points.

**** NO MAKE –UP QUIZZES AND EXAMS ****

Schedule

Lecture #	Research Projects	Assignments Due	Points
Lecture 1	Sets and Real Numbers sets, operations with sets, the real numbers		
Lecture 2	Sets and Real Numbers operations with the real numbers, properties of the real numbers		
Lecture 3	Decimals, Fractions and Percentages decimals, operations with decimals, fractions, mixed numbers, LCD		
Lecture 4	Decimals, Fractions and Percentages operations with fractions and mixed numbers, percentages, Simple and Compound Interest	Quiz 1	5
Lecture 5	Linear Equations linear equations in one variable, linear equations in two variables		
Lecture 6	Linear Equations linear function, three forms for the equation of the line, absolute value equations, investment problems, mixture problems, commission problems	Problem Solving 1 Quiz 2	5 3
Lecture 7	Linear Inequalities linear inequality of one variable, properties of linear inequalities of one variable, compound inequalities, absolute value inequalities	Quiz 3 Quiz 4	20 2
	Midterm Exam (30%)		75
Lecture 8	Systems of Linear Equations systems of linear equations in two variables, solving systems of linear equations in two variables by graphing, applications		
Lecture 9	Systems of Linear Equations solving a system by substitution, the Addition Method, applications	Problem Solving 2	5
Lecture 10	Exponents and Polynomials integer exponents, the power rules, scientific notation, polynomials, multiplying binomials, special products, factoring polynomials, solving equations by factoring		
Lecture 11	Rational Expressions rational expressions, operations of the rational expressions	Quiz 5	7
Lecture 12	Polynomial Functions addition and subtraction of polynomial functions, the Remainder Theorem, fractions and proportions, solving equations involving rational expressions		

Lecture 13	Rational Exponents and Radicals radicals, rational exponents, rules for radicals and rational exponents, operations of radicals, rationalizing the denominator	Quiz 6	4
Lecture 14	Quadratic Equations and Functions quadratic equations, solving quadratic equations, applications		
Lecture 15	Quadratic Equations and Functions quadratic functions and their graphs, applications	Quiz 7 Quiz 8	4 20
	Final (40%)		100

12 extra points are assigned for the “Practice”. Calculated as an average of all the “Practice” tasks (attempts with a maximum grade received) of the course.

Recommended Materials

1. Dugopolski, Mark. (2009) Algebra for College Students (5rd Ed.). McGraw-Hill/Higher Education.
2. Dugopolski, Mark. (2009) Elementary and Intermediate Algebra (3rd Ed.). McGraw-Hill/Higher Education.
3. Nelcon, Marceda, Hoy M. Calvin, Alvey C. George. (2007) Essentials of Math with Business Applications (7th ed.). McGraw-Hill/Irwin.
4. Yoshiwara, K. (2018). Modeling, Functions, and Graphs. Bruce Yoshiwara (last update: 2020)
5. Yoshiwara, K., & Yoshiwara, B. (2019). Elementary Algebra. Bruce Yoshiwara (last update: 2021)
6. Yoshiwara, K., & Yoshiwara, B. (2020). Intermediate Algebra. Bruce Yoshiwara

** The above schedule and procedures are subject to change in the event of extenuating circumstances.*
